

MALLINCKRODT BAKER CERTIFIED EXCIPIENT DISTRIBUTOR PROGRAM

With escalating external pressures to deliver safe, affordable drugs that save lives and enhance quality of life, pharmaceutical companies are looking more and more to strategic sourcing as an effective means of containing costs and managing supply-chain risk without compromising product quality or safety.

Mallinckrodt Baker's Certified Excipient Distributor Program, a strategic partnership between MBI and select chemical distributors, ensures you have a capable supply chain delivering quality performance chemicals and value added services in compliance with global industry best practices. Certified Excipient Distributors comply with rigorous quality standards, offer a host of value-added services and help you optimize your supply chain.

Regulatory Compliance

All MBI Certified Excipient Distributors have undergone and successfully completed a comprehensive audit conducted by MBI's quality department to ensure they adhere to the International Pharmaceutical Excipients Council's (IPEC) Good Distribution Practices (GDP). The combination of Certified IPEC GDP compliance, MBI's own compliance with IPEC's Good Manufacturing Practices (GMP) ensures your MBI products have a documented chain of custody and meet the highest levels of quality, purity and performance.

Value-Added Services

MBI Certified Excipient Distributors offer a number of value-added services to meet specific end customer needs. Moreover, since no two customers are exactly alike, our certified distributors customize their services to your specific needs. Typical services offered include:

- Repalletization
- LTL Shipping
- Incoming Inspection
- Special Product Labeling
- Chemical Inventory Management

Supply Chain Optimization

An optimized supply chain, one that delivers maximum value without introducing excessive risk, requires a cooperative, three-way relationship between customers, suppliers and the distribution channel connecting them. MBI and its Certified Excipient Distributors understand the important role we play in our customer's supply chain. We are ready to help map out your supply chain to control costs while managing the risks that stem from product change or supply interruption.

As a long-time supplier to the pharmaceutical industry, Mallinckrodt Baker understands the imperative to maximize your supply chain's overall value. The Mallinckrodt Baker Certified Excipient Distributor Program ensures that the performance chemicals and related services you purchase through your MBI-based supply chain consistently deliver the highest levels of quality, purity, performance and value.
